Problem Statement

In The fast-paced taxi booking sector, making the most of revenue is essential for long-term success and driver happiness.

Our goal is to use data-driven insights to **maximise revenue streams** for taxi drivers in order to meet this need. Our research aims to determine whether payment methods have an impact on fare pricing by focusing on the relationship between payment type and fare amount…

Research Question

Is there a relationship between total fare amount and payment type?

Can we nudge customers towards payment methods that generate higher revenue for drivers, without negatively impacting customer experience?

Data Overview

For this analysis, we utilized the comprehensive dataset of NYC Taxi Trip records, used data cleaning and feature engineering procedures to concentrate solely on the relevant columns essential for our investigation.

Relevant Column used for this research

- Passenger_count (1 to 5)

- Payment_type (card or cash)

- fare_amount
- trip_distance(miles)

- Duration (minutes)

passenger_count	payment_type	fare_amount	trip_distance	duration
1	2	7.0	0.00	0.00
1	1	52.0	0.00	0.20
2	1	9.5	1.70	13.07
1	1	4.0	0.40	3.08
1	1	6.0	1.20	5.35
...	...	...	...	...
1	2	8.0	1.63	8.80
1	1	8.5	1.81	8.02
1	2	6.5	0.98	6.90
1	1	11.0	2.10	14.23

Methodology

| Step	Description
Descriptive Analysis	Performed statistical analysis to summarize key aspect of the data, Focusing on fare amount and payment types.
Hypothesis Testing	Conducted a T-test to evaluate the relationship between payment type and fare amount, testing the hypothesis that different payment methods influence fare amounts
Regression Analysis	Implemented linear regression to explore the relationship between trip duration (calculated from pickup and dropoff times) and fare amount

Journey Insights

- Customers paying with cards tend to have a slightly higher average trip distance and fare amount compared to those paying with cash.

- Customers paying with cards tend to have a slightly higher average trip distance and fare amount compared to those paying with cash.

Distribution of Fare amount

Distribution of trip distance

	Payment Type	Mean	Standard Deviation
Fare amount	Card	13.7	6.5
	Card	12.25	12.25
Trip Distance	Cash	3.25	2.32
	Cash	2.8	2.23

Preference of Payment Types

Preference of Payment Type
Cash
32.7%

Card
67.3%

- The proportion of customer paying with cards is significantly higher than those paying with cash, with card payments accounting for 67.5% of all transactions compared to cash payments at 32.5%

- This indicates a strong preference among customers for using card payment over cash, potentially due to convenience, security, or incentives offered for card transactions.

Passenger Count Analysis

- Among card payments, ride with a single passenger (passenger_count = 1) comprise the largest proportion, constituting 40.08% of all card transactions.
- Similarly, cash payments are predominantly associated with single-passenger rides, making up 20.04% of all cash transactions.
- There is a noticeable decrease in the percentage of transactions as the passenger count increases, suggesting that larger groups are less likely to use taxis or may opt for alternative payment methods.
- These insights emphasize the importance of considering both payment method and passenger count when analyzing transaction date, as they provide valuable insights into customer behavior and preferences.
Hypothesis Testing

Null Hypothesis: There is no difference in average fare between customer who use credit cards and customers who use cash.

Alternative Hypothesis: There is a difference in average fare between customers who use credit cards and customers who use cash

With a T-statistic of 165.5 and a P-value of less than 0.05, we reject the null hypothesis, suggesting that there is indeed a significant difference in average fare between the two payment methods.

Recommendations

Encourage customer to pay credit cards to capitalize on the potential for generating more revenue for taxi cab drivers.

Implement strategies such as offering incentives or discounts for credit card transactions to incentivize customers to choose this payment method

Provide seamless and secure credit card payment options to enhance customer convenience encourage adoption of this preferred payment method.

Thank You
